## 'The more data we have, the easier it is to take decisions, since energy citizenship is not a simple domain, rather it is complex, multidimensional puzzle. This means that data is needed if we want to increase the rate of citizens who are engaged in activities, who are changing their lives in terms of energy. Having more data means that it would be made simpler to address the actual needs that citizens have. The more data, the less complexities there will be in the future because changing the policy framework is not something simple. Therefore,

'What affects citizen energy communities: no adequate public funding, especially for setting up structures, national legislation creating obstacles. It is a question of access to knowledge.'

Energy Transitions: Principal Drivers and Support Strategies

Engagement in European

In Europe, the engagement of citizens and communities as a way of moving forward the sustainable energy transition has become a question of growing concern. To accelerate the energy transition, citizens need to be put at the heart of these processes, as they will contribute

The term 'energy citizenship' is intended in a broad sense to signify various ways in which citizens can engage in energy transition processes, inter alia renewable energy generation, political action and consumption-based activities such as energy saving and energy efficiency
